

EDUCATION PROGRAMMER AND SYSTEM DEVELOPER

ARE YOU TOMORROW'S CREATOR AND DESIGNER OF APPS, GAMES, AND PROGRAMS?

Getting started with coding is easy, but to pursue it as a profession, one needs to master it at a higher level. This training allows you to take the leap towards becoming a professional developer, equipping you with the knowledge and tools you need to succeed

In a unique blended learning solution, you will receive personal guidance from professional IT instructors. You will learn through hands-on labs, practice assignments, and self-study. You will gain the knowledge and skills in programming to independently create IT systems, applications, and much more.

EDUCATION FOR PROGRAMMERS AND SYSTEM DEVELOPERS

HOW IT WORKS

The education is free for you, and you qualify through your local Employment Service (Arbetsförmedlingen), which considers your previous knowledge in IT and English. A test may be conducted to assess your prior knowledge, and a preparatory training module can bring you to the appropriate level before starting.

The education is full-time and lasts for approximately 30 weeks with flexible learning. It is followed by an internship at organizations in need of programmers and system developers.

The education is modular based. Content and structure may vary locally as they are tailored to the needs of recruiting organizations. The education is instructor-led and includes labs and practice assignments. It is certification-oriented and can offer opportunities for certification in relevant software.

WHO IS IT SUITABLE FOR?

The education and profession are suitable for individuals who either have some background in IT or a strong interest, experience, or knowledge in an IT area. The content is also suitable for those who already have a good understanding of programming and want to become even more proficient. The education aims to cover system development, front-end, back-end, full-stack, etc., in the chosen language. For those who discover the joy of creation and the possibilities of programming, this is a dream job.

WHAT DO YOU WORK WITH?

A system developer is responsible for designing, creating, and implementing software such as web applications, APIs, databases, or apps. The work may also involve developing operating systems for computers and mobile devices or making modifications and updates to existing software.
